SUMMARY

Data scientist driven to solve complex business problems through a curiosity-led, intentional approach. Proficient in building interactive dashboards (Power BI, Grafana, R) and developing robust data pipelines using Python, SQL, and DAX. Excited to leverage technical skills and continuous learning to improve processes, enhance user experience, and drive business value.

EDUCATION

Willamette University

Bachelors and Master of Science in Data Science

Salem, OR

GPA: 3.72

Relevant Coursework: Adv. Data Engineering, Business Analytics Modeling, Machine Learning, Research for Marketing, Python for Data Science, Data Management with SQL, ICBSC

SKILLS

Data Analysis & Visualization: SQL, Python, R, Power BI (DAX), Grafana, Microsoft Excel (Certified, Macros)

Data Engineering: Pipeline Automation, Airflow, dbt, Azure, REST API

RELEVANT EXPERIENCE

Golden Grail Group

Data Science Intern

Summer 2026

Wholesale workbook → PowerBI dashboard

- Built a live Power BI dashboard for weekly wholesale sales metrics, used by department leadership to monitor performance and trajectory.
- Integrated API-sourced data, DAX measures, and the existing Wholesale Excel Workbook structure to create a stable, automated reporting workflow.

Loyalty program risk analysis

- Modeled revenue and consumer-behavior risk across multiple loyalty program scenarios.
- Informed final program design by ensuring discount structures remained within **3% of total store revenue**.

Sales Forecasting Modeling Analysis

- Analyzed and compared regression and decision-tree approaches to improve accuracy in the existing sales forecasting framework.
- Identified model performance gaps and recommended adjustments to strengthen predictive reliability.

Metrc API evaluation

- Conducted a GET-endpoint evaluation of the Metrc API to support more automated and seamless inventory retrieval.

Prague Metro Business Pipeline

Data Engineering Pipeline and Dashboard Project

Summer 2026

Pipeline Architecture

- Built an automated daily ingestion pipeline in Python and Airflow that consolidated data from multiple sources into a centralized data lake.
- Enabled full warehouse rebuilds from lake data, ensuring business continuity in the event of warehouse data loss.

Dimensional Modeling

- Designed dbt dimensional models to transform raw warehouse data into clean, analytics-ready structures.
- Improved reliability and speed of downstream business decision-making by outlining core entities and metrics.

Live Dashboard

- Developed live Grafana dashboards on top of the dimensional model, giving stakeholders real-time visibility into system performance and consumer demographics.
- Supported operational and strategic decisions through clear, continuously updated insights.

Blue Heron French Cheese Company

Floor Manager

Tillamook, OR

April 2017 - Dec. 2025

Kept 4 departments aligned on daily priorities by coordinating structured shift reports and visual goal tracking.

Optimized wine sales and product stocking levels by analyzing daily POS reports, revenue totals, and category performance trends to set data-driven sales goals.

Delivered seamless customer experiences across retail, wine tasting, and kitchen services by bridging departmental gaps with flexible staffing support and cross-departmental communication.

Maintained uninterrupted operations in a lean-staffed environment by manually coordinating compliant break schedules across 4 departments, balancing regulatory requirements with business needs.
